

AI Experience

David has deployed Machine Learning (ML) business classification model into financial APIs and SaaS apps. He validated the data used in the model and designed the user experience flow for Human-in-the-loop (HITL) validation. He also created a process for offline API ML prediction evaluation.

David was also responsible for tracking computer vision machine learning (CVML) model building and deployment, was trained on adding human annotation for HITL intervention and model improvement.

AI Education

David has studied artificial intelligence subjects, including but not limited to:

- Prompt Engineering Skills – LinkedIn Learning Path
- Foundations of Responsible AI – LinkedIn Learning Course
- Machine Learning Foundations for Product Managers - Duke University

He also set up and customized this AI Chatbot you're using. 😊
